

It appears radio has finally caught up to the cable and DSS wars regarding the use of signals otherwise emitted into the public domain. The content of NAB's petition 04-160 is ridiculous, it stifles market completion and free enterprise, and given current events I'm shocked that Representatives Pickering and Green have nothing better to do with their time. Please reject this petition as it sets a dangerous precedence of special interest control over content which I am ?allowed? to hear. You know, our country takes great pride in our democracy and definitely feels better about out media outlets than those countries where the state controls the media. If petition 04-160 is given further consideration, then we are no better than those nations that restrict the enterprise and freedoms of outlets which provide content and services to an audience which otherwise enjoys and demands such information.
